1 Experiments with Excised Larynges	1
1.1 Choice of Experimental Species	2
1.2 Excision and Preparation Methods	4
1.2.1 Criteria for Tissue Selection and Rejection	4
1.2.2 Tissue Excision, Examination, and Dissection	5
1.2.3 Cool Storage and Preservation	6
1.2.4 Freezing, Fixing, and Shipping	6
1.3 Anatomical Measurements on the Laryngeal Framework	7
1.3.1 The Thyroid Cartilage	7
1.3.2 The Cricoid Cartilage	9
1.3.3 Arytenoid Cartilages	12
1.3.4 First Tracheal Ring	14
1.3.5 Epiglottis	16
1.4 Geometrical Description of the Glottis and the Vocal Folds	18
1.4.1 Dimensions of the Vocal Fold	18
1.4.2 Dimensions of Vocal Fold Tissue Layers	20
1.4.3 Molds and Castings	21
1.4.4 Radiographic Imaging	23
1.4.5 Mathematical Model of the Static Pre-Phonatory Glottis	24
1.5 Methods of Observation of Vocal Fold Vibration	26
1.5.1 Preparing the Larynx for Mounting	26
1.5.2 Biohazard Considerations for Vibrating Tissue	28
1.5.3 Placement of Sutures and Markers	28
1.5.4 Larynx Mounting and Vocal Fold Posturing	30
1.5.5 Humidification and Heating of Tissue and Air	34
1.5.6 Attachment of Glottographic Sensors	37
1.5.7 Hemilarynx Preparation and Observation	38
1.5.8 Videostroboscopy	40
1.5.9 High Speed Video Imaging	40
1.6 Kinetic and Kinematic Data on Vocal Fold Vibration	41
1.6.1 Measurement of Pressure and Flow	41
1.6.2 Amplitude of Vibration	42
1.6.3 Fundamental Frequency	43
1.6.4 Mucosal Wave Velocity and Vertical Phase Delay	45

1.6.5	Radiated Power and Intensity	50
1.6.6	Contact Stress	52
1.6.7	Asymmetry in Vibration	53
1.7	Chapter Summary	56
	Common Notation	57
	Bibliography	57
2	Fundamentals of Soft Tissue Mechanics	63
2.1	Elements of Continuum Mechanics	63
2.1.1	Displacement Vector	63
2.1.2	Large and Small Deformations	65
2.1.3	Stress, Strain and Constitutive Equations	68
2.1.4	Elastic Solids	70
2.2	One-Dimensional Models of Soft Tissue	71
2.2.1	Contractile Properties of Muscles	72
2.2.2	Constitutive Equation for a One-Dimensional Muscle Model	75
2.2.3	Active Tissue Properties	76
2.2.4	Passive Tissue Properties	77
2.2.5	One-Dimensional Shear Properties	78
2.3	Mechanical Testing of Laryngeal Tissues	79
2.3.1	In Vitro Techniques	79
2.3.2	In Vivo Techniques	82
2.4	Matching the Soft Tissue Model to Laboratory Data	84
2.4.1	Stress-Strain Relationship	84
2.4.2	Stress-Relaxation	89
2.4.3	Force Velocity Relation	92
2.4.4	Activation and Contraction Times	92
2.4.5	Sinusoidal Strain with Muscle Activation	96
2.4.6	Sinusoidal Shear Strain	97
2.5	Chapter Summary	99
	Common Notation	99
	Bibliography	102
3	Vocal Fold Posturing	105
3.1	Adduction and Abduction	105
3.1.1	Analytical Expressions for Two-Dimensional Static Pos- turing of the Vocal Processes	106
3.1.2	Empirical Evaluations of Biomechanical Constants	109
3.1.3	Dynamical Equations for Adduction and Abduction	114
3.2	Vocal Fold Elongation	116
3.2.1	Analytical Equations for Static Equilibrium	117
3.2.2	Empirical Evaluation of Biomechanical Constants	122
3.2.3	Dynamical Equations for Elongation	128
3.3	Combined Elongation and Adduction	129
3.3.1	Determination of the Adductory Strain	129

3.3.2	Solution of the Combined Differential Equations	131
3.4	Posturing with Deformable Body Theory	133
3.4.1	Tissue Properties	135
3.4.2	Boundary Conditions	138
3.4.3	Solution Options	139
3.4.4	Corroborating Measures	140
3.4.5	Limitations and Future Directions	140
	Common Notation	141
	Bibliography	144
4	Free Oscillation of Vocal Fold Tissue Models	149
4.1	Low-Dimensional Body-Cover Models	149
4.1.1	Equations of Motion for Three Degrees of Freedom	151
4.1.2	Equivalence of the Rotating-Plate Model and the Three-Mass Model	152
4.2	High-Dimensional Point-Mass Formulation	158
4.2.1	Elastic Restoring Forces	160
4.2.2	Boundary Conditions	161
4.2.3	Equations of Motion	163
4.2.4	Modes for High-Dimensional Point-Mass and String Models	164
4.2.5	Vertical Degrees of Freedom	167
4.3	Continuum Models	170
4.3.1	Constitutive Equation for Transversely Isotropic Materials	171
4.3.2	Inversion of the Compliance Matrix	172
4.3.3	Planar Strain	174
4.3.4	Compressibility and Incompressibility	175
4.3.5	Equations of Motion	176
4.4	Relating Continuum Parameters to Lumped-Element Parameters	178
4.4.1	Equivalent Spring Constants for Low-Dimensional Models	179
4.4.2	Inclusion of Fiber Stress in Low-Dimensional Models	182
4.5	Analytic Solutions for Continuum Models	184
4.5.1	Normal Modes for One-Dimensional Strain	184
4.5.2	Decoupling the Wave Equations for Planar Strain	190
4.5.3	Potential Energy and Strain Energy	190
4.5.4	Normal Modes for Planar Strain	192
4.6	A Kinematic Model of the Glottis Based on Two Normal Modes	197
4.6.1	Glottal Geometry	197
4.6.2	Glottal Area	201
4.6.3	Vocal Fold Contact Area	204
4.6.4	Vertical Discretization	204
4.6.5	Empirical Rules for Combining Control Parameters	205
4.6.6	Examples of Simulated Glottal Area and Contact Area Waveforms	212
4.7	Finite Element Solutions for Continuum Models	216
4.7.1	Interpolation Functions	216
4.7.2	Evaluation of Energy Integrals	218

4.7.3	Viscous Damping	222
4.7.4	Stiffness, Mass, and Damping Matrices	224
4.7.5	Nodal Force Vector	226
4.7.6	Calculations of The Shape Functions	229
4.7.7	Assembly of Element Matrices into Global Matrices	230
4.7.8	Time Integration	230
4.8	Summary of Chapter	231
	Common Notation	231
	Bibliography	234
5	Glottal Aerodynamics	237
5.1	Basic Flow Theory	237
5.1.1	Continuity Law and Incompressibility	237
5.1.2	Equation of Motion	238
5.1.3	The Bernoulli Equation	242
5.1.4	Energy Balance and Heat Loss	243
5.1.5	Viscous Effect and Shear Stress	243
5.1.6	Navier-Stokes Equation	244
5.1.7	Vorticity Transport Equation	246
5.2	Applications to Confined Channel Flow	248
5.2.1	Steady Flow Between Parallel Plates	248
5.2.2	Steady Flow in Circular Pipes	249
5.2.3	Boundary Layer Effects	250
5.2.4	Friction Coefficient and Flow Separation	253
5.2.5	Abrupt Expansions and Contractions	254
5.2.6	Transglottal Pressure-Flow Relations	255
5.3	Models of the Glottal Flow Pulse Based on Glottal Area	258
5.3.1	Lumped Vocal Tract Inertance	258
5.3.2	Controlling Pulse Shape and Glottal Noise (Aspiration) by Rules	262
5.3.3	Distributed Vocal Tract Acoustic Load	264
5.3.4	Glottal Area and Glottal Flow Waveforms	266
5.4	Driving Pressures in the Glottis	270
5.4.1	Division of the Glottis into Vertical Sections and Channels	270
5.4.2	Pressures in a Trapezoidal Flow Channel	271
5.4.3	Calculation of the kinetic pressure at flow detachment	274
5.4.4	Driving pressures for glottal closure	275
5.4.5	Calculation of contact point and contact area	276
5.4.6	Pressures in Flow Channels with Curvature	277
5.4.7	Pressures in Partially Sealed Sections	279
5.5	Numerical Modeling of Steady Flow	279
5.5.1	Grid Generation	280
5.5.2	Navier-Stokes Equations in the Transformed Condition System	282
5.5.3	Solution for Momentum Equations	283
5.5.4	Modeling of Pulsatile Flow in the Glottis	285

5.5.5	Derivation in Two-Dimensions	288
5.5.6	Pressure and Velocity Coupling	290
	Common Notation	291
	Bibliography	293
6	Computer Simulation of Vocal Tract Acoustics	297
6.1	Time Dependent Compressible Flow in Gases	297
6.2	Two-Dimensional and One-Dimensional Velocity Vectors	298
6.3	Finite-Difference Solution for a Soft-Walled Vocal Tract	300
6.3.1	Division of the Vocal Tract Into Sections	301
6.3.2	Boundary Condition for a Yielding Wall	303
6.3.3	Velocity Profiles and Viscous Drag	304
6.3.4	An Acoustic Lumped-Element Circuit Analog	306
6.3.5	Boundary Conditions Between Serial Sections	307
6.3.6	Runge-Kutta Implementation of Simplified Aeroacoustic Equations in Discrete Serial Vocal Tract Sections	311
6.3.7	Short Sections	313
6.3.8	Termination at the Lungs	317
6.3.9	Termination at the Lips	319
6.4	A Wave-Reflection Analog for A Hard-Walled Vocal Tract	319
6.4.1	Simulation of Boundary Conditions At A Junction	320
6.4.2	Simulation of Glottal Boundary Condition for a Non-Interactive Flow Source	322
6.4.3	Simulation of Nasal Coupling	323
6.4.4	Simulation of Mouth and Nose Radiation	324
6.4.5	Addition of a Subglottal Tract And Interactive Source- Filter Coupling	327
6.4.6	Combined Simulation for The Entire System	328
6.5	Data From Magnetic Resonance Imaging	330
	Common Notation	330
	Bibliography	337
7	Self-Sustained Vocal Fold Oscillation (Nonlinear Dynamics)	339
7.1	Parameter Spaces for Studying Phonation	339
7.1.1	Voice Range Profile	341
7.1.2	Muscle Activation Plot (MAP)	342
7.1.3	Cyclic Parameter Contour	343
7.1.4	Narrow Band Spectrogram	346
7.1.5	Phase Plane Portrait	346
7.1.6	Bifurcation Diagrams for Coupled Oscillators	347
7.2	Nonlinearities in Vocal Fold Vibration	348
7.2.1	Parabolic Pressure-Flow Relation in the Glottis	349
7.2.2	Delayed Feedback from a Mucosal Wave	350
7.2.3	Delayed Feedback from an Air Column	351
7.2.4	Stress-Strain Relations in the Tissue	351
7.2.5	Collision Between the Vocal Folds	352

7.2.6	Coupling to Vocal Tract Resonances	352
7.2.7	Coupling to an Asymmetric Vocal Fold	353
7.2.8	Shear Thinning in Vocal Fold Tissues	353
7.3	Analytical Treatment of Small Amplitude Vocal Fold Oscillation	353
7.3.1	Relation Between Mucosal Wave and Normal Modes	353
7.3.2	Glottal Entry and Exit Areas	355
7.3.3	Glottal Flow	356
7.3.4	Coupled Equations for Airflow and Tissue Displacement	357
7.3.5	Small Amplitude Oscillation Around a Quiescent Point	358
7.3.6	Quiescent Equilibrium Displacement and Collapsible Tube Conditions	360
7.3.7	Oscillation Threshold Pressure	363
7.4	Development of Rules for Muscle Control	366
7.4.1	Elongation Rule	366
7.4.2	Nodal Point Rule	367
7.4.3	Thickness and Depth Rules	368
7.4.4	Adduction Rule	368
7.4.5	Convergence Rule	369
7.5	Simulations with Low-Dimensional Models	369
7.6	Chapter Summary	377
	Common Notation	377
	Bibliography	379
